

IZMIR INSTITUTE OF TECHNOLOGY

ID322 AND CENG318 (MÜDEK ÖÇ6-PÇ8b) COURSES JOINT ASSIGNMENT II

Hello everyone,

When focusing on problem solving in design thinking approach, divergent thinking is often used at first stage to detail all the elements of a problem and related solution possibilities. In the second stage, the obtained problem and solution proposals are narrowed down and clarified by the approach of convergent thinking, and more refined solution proposals are presented. In your first assignment, you also focused on looking at the problem points from a broader perspective and tried to integrate all possible scenarios into your user interface designs.

In this assignment, we expect you to **refine** the interface solutions that you considered in a broad perspective in the first stage. In this context, you can **update** the **personas** you created in your first assignment, and you can more clearly define the basic interface interaction needs of the personas you have specified. You can also revisit the experience maps and user flows you created earlier in the context of user-product interaction. In the scope of this assignment:

1. Create a more clearly defined **persona**,
2. Create a more clearly structured experience and **interaction map/flow**,
3. *Revise* the detailed interface prototypes you created in the first stage according to the criteria in the first two items, please *focus on the user experience* rather than representing all the properties of the product; try to **enhance** user experience by fostering Norman and Nielsen's usability rules i.e. reduce the workload of the users.
4. Create **working interface proposals** using tools such as *Figma, Canva, etc.*,
5. Prepare a short **demo video** explaining the user interaction of the interface prototypes you have created. **Please do not forget the narrative.**
6. Create a "process file/report" that will transfer all these processes from start to finish (please indicate the developed/changed sections of the first assignment if necessary/applicable),
7. Create a separate **group report** that conveys the workload and responsibilities and meeting processes within the group. Please include your Full name and student ID as a signature at the beginning of your report. Since this assignment is collaborative work, your weekly meetings form should include who was responsible with what; all participants must explicitly explain their responsibilities and sign the report.
8. You are expected to share **a link** to the working prototype in both the process file/report and the group report.

Important Notes:

- Working prototypes include **both smartphone and smartwatch interfaces**. Please present these UIs in separate sections in the progress reports/files.
- When determining tasks and responsibilities in sharing the workload of the assignment, *please make sure that students of both departments receive the necessary work order and responsibility*. Otherwise, inform all group members immediately by noting the group report.
- In the process file/report, please also include the product designs and physical interface proposals developed by Industrial Design students so that all the processes of the entire project can be presented more clearly.
- It is recommended to prepare **at least one mood board** for each product to strengthen your personas and match the product's language design.
- It is recommended to prepare a **story board** to convey the physical use of the product, to convey the user's experience and interaction dynamics more clearly.
- In both UIs, please be careful about the paddings of the visual elements regarding screen surface endings and between the interactive user interface elements like buttons, knobs, etc.

Deliverables:

- A Pdf document reporting for your products and development processes (includes 1 to 8)
- Two videos to demonstrate your UI designs for Smartphone and Smart Watch.
- A group report to define responsibilities and timeline
 - You must define all group members with student ID numbers.
 - You must define a timeline in which you specify meeting types (face-to-face/online) in dates and times.
 - You must define all group members' responsibilities and duties during this joint assignment in a table at the end of your report.

Good Luck.
